Learning by Coloring - Sand Dune Lizard

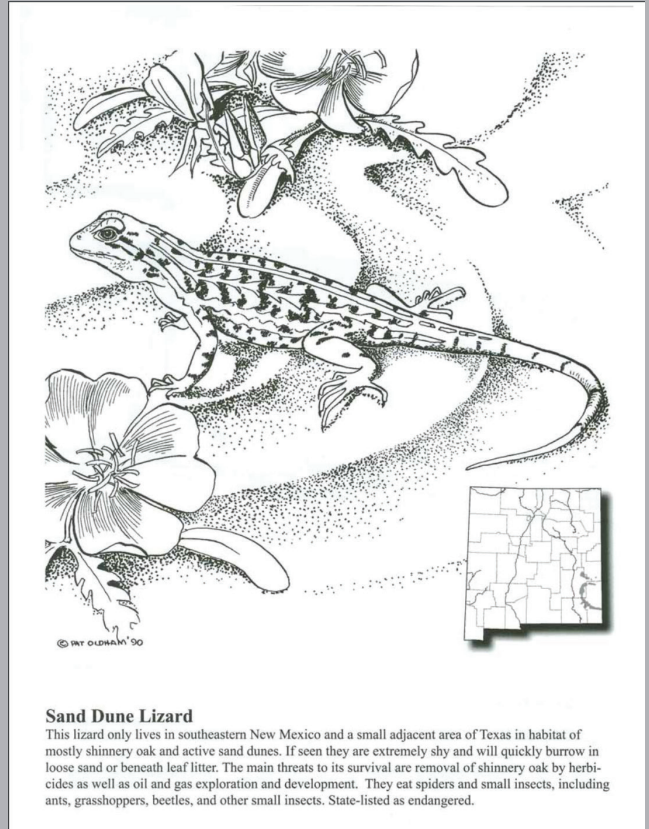

Grade level:

Pre-K to 4th

Objective:

Learn about the sand dune lizard in New Mexico by coloring the following illustration while reading about them.

The sand dune lizard (*Sceloporus arenicolus*) has the second smallest range of any lizard in North America, only occurring in a narrow crescent-shaped area of southeastern New Mexico and western Texas. Throughout their range in New Mexico and Texas, elevation varies from 2,550-4,595 feet. The heart of the sand dune lizard's range is the Mescalero Sands, rolling dunes in southeastern New Mexico.
